

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 2, 13, 16, and 18-21 without prejudice or disclaimer, and AMEND claims 1, 6, 14, and 22 in accordance with the following:

1. (CURRENTLY AMENDED) A front projection type screen, comprising:
a transparent base;
a diffusion member formed on one surface of the transparent base; ~~and~~
a retroreflection prism array formed on another surface of the transparent base, wherein the diffusion member comprises ~~an opaque~~ a diffusion sheet formed on the one surface of the transparent base; and
a reflection coating layer on a surface of the retroreflection prism array.
2. CANCELLED
3. (PREVIOUSLY PRESENTED) The front projection type screen as claimed in claim 1, further comprising a light absorbing member blocking light behind the retroreflection prism array.
4. (ORIGINAL) The front projection type screen as claimed in claim 3, wherein the retroreflection prism array and the light absorbing member form an air layer therebetween.
5. (ORIGINAL) The front projection type screen as claimed in claim 1, wherein the diffusion member diffuses light in vertical and horizontal directions, where the diffusion of light in the vertical direction is different from the diffusion of light in the horizontal direction.
6. (CURRENTLY AMENDED) The front projection type screen as claimed in claim ~~21~~, wherein the diffusion member diffuses light in vertical and horizontal directions, where the diffusion of light in the vertical direction is different from the diffusion of light in the horizontal direction.

7. (ORIGINAL) The front projection type screen as claimed in claim 3, wherein the diffusion member diffuses light in vertical and horizontal directions, where the diffusion of light in the vertical direction is different from the diffusion of light in the horizontal direction.

8. (ORIGINAL) The front projection type screen as claimed in claim 4, wherein the diffusion member diffuses light in vertical and horizontal directions, where the diffusion of light in the vertical direction is different from the diffusion of light in the horizontal direction.

9. (ORIGINAL) The front projection type screen as claimed in claim 5, wherein the diffusion member comprises an angle of diffusion of light in a horizontal direction greater than an angle of diffusion of light in a vertical direction.

10. (ORIGINAL) The front projection type screen as claimed in claim 6, wherein the diffusion member comprises an angle of diffusion of light in a horizontal direction greater than an angle of diffusion of light in a vertical direction.

11. (ORIGINAL) The front projection type screen as claimed in claim 7, wherein the diffusion member comprises an angle of diffusion of light in a horizontal direction greater than an angle of diffusion of light in a vertical direction.

12. (ORIGINAL) The front projection type screen as claimed in claim 8, wherein the diffusion member comprises an angle of diffusion of light in a horizontal direction greater than an angle of diffusion of light in a vertical direction.

13. CANCELLED

14. (CURRENTLY AMENDED) The front projection type screen as claimed in claim 431, wherein an extension direction of the diffusion sheet is a vertical direction.

15. (ORIGINAL) The front projection type screen as claimed in claim 14, wherein the diffusion member comprises an angle of diffusion of light in a horizontal direction greater than an angle of diffusion of light in the vertical direction.

16. CANCELLED

17. (ORIGINAL) A front projection type screen comprising:

a transparent base;

a diffusion member formed on one surface of the transparent base;

a retroreflection prism array formed on another surface of the transparent base; and

a reflection coating layer formed on a surface of the retroreflection prism array

maximizing a quantity of light reflected by the screen and proceeding back.

18-21 CANCELLED

22. (CURRENTLY AMENDED) A front projection type screen comprising:

a transparent base;

a diffusion member formed on one surface of the transparent base limiting diffusion of light in a vertical direction while increasing diffusion of the light in a horizontal direction; ~~and~~

a retroreflection prism array formed on another surface of the transparent base making the light, after passing the diffusion member, proceed back parallel to incident light, securing a wide angle of visibility in a horizontal direction and limiting an angle of visibility in a vertical direction; and

a reflection coating layer on a surface of the retroreflection prism array.
